

Bhojpatra Design System

4 colours · 2 fonts · 8-point grid — everything a developer needs to build on-brand.

All values below are the real tokens from `src/app/globals.css`. Build from these tokens — never hard-code a value that isn't listed here.

1 · COLOURS — EXACTLY FOUR

			
Red #B92025 · 185 32 37	Cream #F0D09E · 240 208 158	Black #000000 · 0 0 0	White #FFFFFF · 255 255 255

ROLE	HEX	TAILWIND TOKEN
Red	#B92025	brand-red / primary
Cream	#F0D09E	brand-cream / secondary / border
Black	#000000	brand-black / ink
White	#FFFFFF	brand-white / surface / bg

- No other hue anywhere — no greys, beiges, greens, blues, browns; no tints or shades.
- Only allowed variation is **opacity on one of these four**, and only for shadows/overlays.
- Semantic states use brand colours:  success = cream,  warning = cream,  error = red. No green/amber.

2 · TYPOGRAPHY — EXACTLY TWO FONTS

FONT	WEIGHT	WHERE
Ananda Neptouch 2	Regular 400	Logo/wordmark, hero & section display headings, <code>h1–h6</code> , <code>.font-display</code> . Decorative — never running text.
Open Sans	Regular family	Everything else: body, UI labels, buttons, forms, subtitles, captions.

CLASS	FONT	SIZE	LINE-HEIGHT	TRACKING	WEIGHT
<code>.text-hero</code>	Display	40 → 60px	1.02	–0.02em	400
<code>.text-title</code>	Display	28 → 40px	1.12	–0.01em	400
<code>.text-app-title</code>	Open Sans	22 → 28px	1.25	–0.02em	700
<code>.text-subtitle</code>	Open Sans	17 → 19px	1.55	—	400
<code>.text-body</code>	Open Sans	15px	1.6	—	400
<code>.text-caption</code>	Open Sans	12px	1.45	—	400

<code>.eyebrow</code>	Open Sans	inherit	—	0.18em · UPPERCASE	—
-----------------------	-----------	---------	---	--------------------	---

3 · SPACING — 8-POINT SCALE

TOKEN	REM	PX	TOKEN	REM	PX
<code>bp-1</code>	0.5	8	<code>bp-5</code>	2.5	40
<code>bp-2</code>	1	16	<code>bp-6</code>	3	48
<code>bp-3</code>	1.5	24	<code>bp-7</code>	3.5	56
<code>bp-4</code>	2	32	<code>bp-8</code>	4	64

Layout snaps to multiples of 8. Utilities: `p-bp-3`, `gap-bp-2`, etc.

4 · CORNER RADIUS

TOKEN	PX	USE
<code>rounded-control</code>	12	Buttons, inputs
<code>rounded-card</code>	16	Cards, panels
<code>rounded-sheet</code>	20	Bottom sheets
<code>rounded-hero</code>	24	Media / hero tiles

5 · ELEVATION (SHADOWS) — BLACK/RED ALPHA ONLY

TOKEN	VALUE
<code>shadow-card</code>	0 1px 2px rgba(0,0,0,.04), 0 8px 24px -12px rgba(0,0,0,.10)
<code>shadow-pop</code>	0 2px 8px rgba(0,0,0,.05), 0 16px 40px -16px rgba(0,0,0,.18)
<code>shadow-modal</code>	0 24px 60px -20px rgba(0,0,0,.35)
<code>shadow-brand</code>	0 10px 28px -12px rgba(185,32,37,.40)
<code>shadow-pop-up</code>	0 -8px 28px -14px rgba(0,0,0,.16) — upward sticky bars
<code>shadow-soft</code>	0 2px 12px -4px rgba(0,0,0,.08)

6 · MOTION

TOKEN	VALUE	USE
<code>--dur-fast</code>	150ms	quick state changes
<code>--dur</code>	200ms	default UI transitions
<code>--dur-slow</code>	250ms	larger moves
<code>--ease-out-soft</code>	cubic-bezier(.22,.61,.36,1)	UI interactions
<code>--ease-out-expo</code>	cubic-bezier(.16,1,.3,1)	entrances / reveals

All motion gated behind `prefers-reduced-motion`. Transitions ≤ 250ms, no bounce.

7 · LAYOUT CHROME & INTERACTION

SPEC	VALUE
App header height	84px mobile (5.25rem + safe-top) · 92px desktop
Bottom tab bar height	72px (4.5rem)
Minimum touch target	44px (.tap) — every interactive control
Focus ring	0 0 0 2px #FFFFFF, 0 0 0 4px rgba(185,32,37,.45) — white offset + red halo
Scrollbar	8px · red thumb on cream track
Text selection	red background, cream text
Breakpoints	sm 640px · lg 1024px (mobile-first below lg)

8 · MOBILE VS DESKTOP

Mobile-first: everything below is the phone spec; the desktop column applies at the `lg` breakpoint ($\geq 1024\text{px}$). Type sizes are fluid — they scale between the two ends automatically.

ELEMENT	MOBILE (< 1024PX)	DESKTOP ($\geq 1024\text{PX}$)
Hero heading (.text-hero)	40px	60px
Section title (.text-title)	28px	40px
Screen title (.text-app-title)	22px	28px
Subtitle (.text-subtitle)	17px	19px
Body / caption	15 / 12px	15 / 12px (same)
App header height	84px (5.25rem + safe-top)	92px (5.75rem + safe-top)
Page top padding (.app-page-pad)	88px (5.5rem)	104px (6.5rem)
Bottom tab bar	72px, visible	hidden
Sticky bottom CTA (.app-sticky-cta)	fixed above tab bar	hidden
Bottom safe padding (.app-bottom-safe)	104px (6.5rem)	56px (3.5rem)
Hero image drift animation	frozen (no zoom)	slow 28s ambient zoom
In-page anchor scroll	native (snappy)	CSS smooth-scroll

- Design the phone layout first at **360–430px**; the same components reflow at `lg`.
- Respect safe-area insets (`env(safe-area-inset-*)`) top & bottom for notch / home-bar / installed PWA.
- 44px minimum touch target holds on **both** mobile and desktop.

9 · DARK MODE

Same four hexes, roles inverted (surfaces → black, ink → white, cream stays accent/border). Opt-in via `.dark` / `[data-theme="dark"]` or system preference. No new colours introduced.

TL;DR — 4 colours · 2 fonts · 8px spacing grid · 12/16/20/24px radii · 44px min touch target · motion $\leq 250\text{ms}$ respecting reduced-motion · breakpoints 640 / 1024. Build from the tokens in `globals.css` — don't invent values.

Bhojpatra · Feast Booking Platform — generated from `src/app/globals.css`
